This is an Open Invitation Letter to all Engaged Public, Stakeholders, Political candidates, & elected representatives. By signing this letter, you support our mission of Nuclear Advocacy through Grassroots Education.

Our mission is inclusive of advanced nuclear technology, SMRs (Small Modular Reactors) MSR (Molten Salt Reactors), educating the grassroots public about the science and engineering behind the Yucca Mountain Application Review Process at the Department of Energy and the Nuclear Regulatory Commission. Each of these research programs are necessary for the Rebranding of Nuclear Technology.

"Although I am uncommitted on Yucca Mountain as a nuclear storage facility, I believe that the Yucca Mountain Application Review Process should be completed".

Dear Friends:

We are asking all engaged public, stakeholders, political candidates & elected representatives who are willing to go on record to **support the USNEF mission of nuclear technology education & the Yucca Mountain Application Review Process.**

It is the opinion of USNEF and dozens of industry groups and associations that our grassroots public for many years have been omitted from the advanced technology dialogue and they need inclusion into the process. The Yucca Mountain application review process, is the study results of many years of scientific & engineering commissioned by Congressional law. This review should be completed in order to determine the studies ability to secure the safety and sustainability of the facility.

If you agree to our mission of nuclear technology education and the Yucca Mountain Application Review Process, please indicate by signing below accordingly.

Signature: “I _____ support nuclear technology education and the completion of the Yucca Mountain Application review process by the Department of Energy.

Print name: _____.

It is very important that you respond to this letter. You can return this by email to: comments@usnuclearenergy.org or postal mail to **USNEF, PO Box 2867, Sparks, NV 89432-2867.**

Additional information about Yucca Mountain and our nuclear advocacy website at:

<http://www.usnuclearenergy.org> and our **YES Symposiums** website at: <http://usnuclearenergy.org/yes/default.html>

These are the **facts**, the grassroots public should know about Yucca Mountain: It is a thirty + year study by **8 of Americas national laboratories**, input and review recommendations from more than **100 US colleges** and universities with a taxpayer investment into the study of more than **\$10 Billion**. The license application study was **reviewed by more than 200 scientists and engineers** at the Nuclear Regulatory Commission with **no disqualifying elements found**. To put it bluntly, political opposition to such an encompassing study carries little merit. Nearly every stakeholder in the world managing nuclear waste observed the Yucca Mountain study application process. The degree and FACTS of this study are overwhelming.
