

Nuclear Advocacy Through
Grassroots Education

US Nuclear Energy Foundation

“Think About It”

As citizens we have not been given the truth about the Yucca Mountain Project. The purpose of the DOE Yucca application was to provide the scientific analysis to determine that truth, but politics and media misrepresented the application process and the facts behind the science and engineering study.

- Yucca will be a huge economic engine for Nevada citizens.
- Yucca could be proposed as a Public-Private Partnership.
- 70,000-tons-of waste has a reprocessed value in multiple billions.
- Not building Yucca, the courts have upheld 11 billion in damages to power companies (expected to hit 20 billion by 2020)
- The nuclear waste fund sits at 40 billion dollars for construction
- Government and political obstruction is responsible for the Yucca failure.

Nearly every factor in our lives eventually
comes to a time for REASSESSMENT!

It is “time” for Yucca NOW!
